

Systematic Index of:

BERGER Helmut (1999): Monograph of the Oxytrichidae (Ciliophora, Hypotrichia). -
Monographiae Biologicae 78: 1-1080. Details at Springer website

website of the author: <http://www.protozoology.com>

Systematic Index

The index contains all names of hypotrichous ciliates mentioned in the book, including vernacular names (for example, amphisiellids); food organisms and other ciliates are usually not included. The index is two-sided, that is, species appear both with the generic name first (for example, *Stylonychia mytilus*) and with the species name (epithet) first (*mytilus*, *Stylonychia*). Valid (in my judgement) oxytrichid species and genera are in **boldface italics** print. Invalid taxa (junior homonyms, synonyms, outdated combinations, incorrect spellings, species indeterminate, nomina nuda) are given in *italics*. Homonyms (for example, *Plagiotricha* BORY and *Plagiotricha* KENT) are not included separately, that is, author names are omitted. Parentheses, correctly used to mark a subgenus (ICZN 1985, Article 6a), are also omitted because in most cases they have not been applied correctly. Suprageneric taxa are given in normal type (for example, Amphisiellidae), valid oxytrichid suprageneric taxa in **boldface** (for example, **Stylonychinae**). **Boldface page number** indicates the location of a valid taxon in the systematic section, “T” indicates the location of the table with the morphometric characterisation.
