Illustrated guide and ecological notes to ciliate indicator species (Protozoa, Ciliophora) in running waters, lakes, and sewage plants*

by H. BERGER & W. FOISSNER

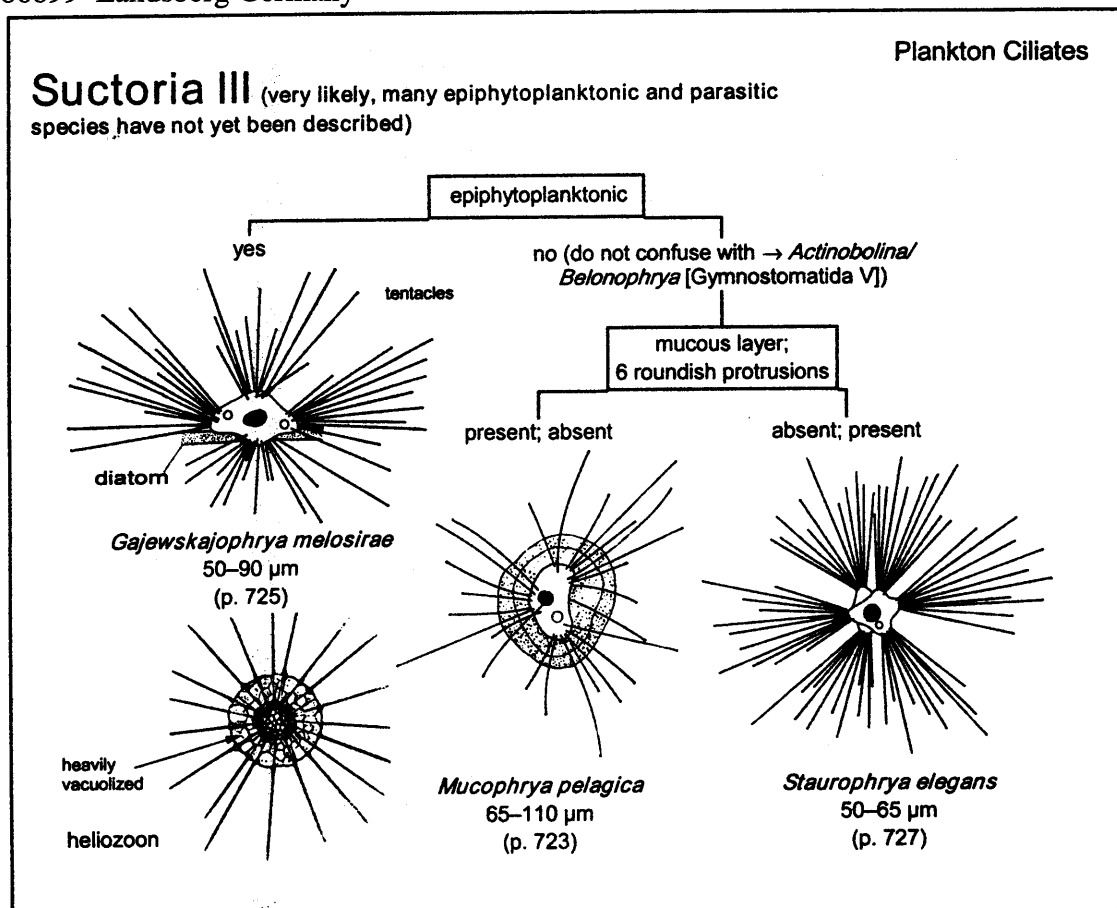

We gathered the keys and ecological notes contained in the "blue books", that is, in the five volumes of the "Ciliate Atlas". The resulting "Red Monograph" has 160 pages and allows the fast identification of 357 common benthic and planktonic freshwater ciliates via a single key and with few basic knowledge.

This is the sole such key available worldwide and is also ideal for student courses! Compared to the format and high printing quality, the new key is cheap (~50 €) and thus should be affordable for everyone. You can order the Red Monograph via the FAX order form on back or put the order form (= this sheet) in an envelope and send it to:

ECOMED company

Justus-von-Liebig-Str. 1
